# Carbon Market Policy Dialogue #1

24 September 2020

Session 2: Price control: volume- and price-based mechanisms

Chaired by Simone Borghesi | European University Institute, FSR Climate

## Introduction

The project LIFE DICET supports European Union and Member States policymakers in deepening international cooperation for the development and possible integration of carbon markets.

The first meeting of the Carbon Market Policy Dialogue (CMPD) of the LIFE DICET project brings together academia, stakeholders and senior policymakers from different carbon markets worldwide, in a unique process for a fruitful exchange on carbon market integration. The CMPD aims to facilitate enhanced international cooperation between Emissions Trading Systems regulators, namely the European Commission (DG Climate Action), California-Quebec, China, Switzerland and New Zealand within the framework of the LIFE DICET project.

The background report *“ETSs with different price control mechanisms: implications for linking”* has been shared with the participants in order to help stir the discussions during the first session “Price control: volume- and price-based mechanisms”. The feedback received at this occasion will be useful for the preparation of final version of the report after the meeting.

## **Programme**

---

17.30 - 17.35 ***Introduction***

**Simone Borghesi** | European University Institute
